Part 2: Level 3 AI-use declaration

Note: I prepared this text to match the Evidence page of my website. The official template (BA2026_Capstone_AI_Use_Declaration_BLANK.docx) was not available when this was drafted, so the layout may need to be copied into it.

Student details

Field	Entry
Student name	Mukhammyedali Khabi
Student ID	[add your student ID]
Group	AIB-2601 (AI and Business)
Course	Business Administration (BA2026), Year 1, Trimester 1 (2026–2027)
University	Astana IT University, School of Digital Public Administration
Company A (reference) / Company B (target)	Cameco Corporation / NAC Kazatomprom JSC
AI-use level declared	Level 3
Date	November 2026

Part A: AI systems register

Tool	Provider and period	Used for
ChatGPT	OpenAI, Oct–Nov 2026	Initial brainstorming, outlining essay points and grammatical clarity across Attestations A1–A4.
Gemini	Google, Oct–Nov 2026	Retrieving and cross-checking earlier weekly coursework, mapping Capstone sections §§1–9, and structuring the 7-column 12-month roadmap.
Claude	Anthropic, Nov 2026	Formatting the E-Portfolio HTML/CSS pages and tables, and drafting the Capstone Report and Business Impact Deck from my verified coursework, under my review.

Part B: Level 3 activity register

Component	AI tool	AI activity	My contribution and verification
§1 Context	Gemini; Claude	Mapped the section; drafted text from my coursework	Chose the sources, revised my Week 1 view, checked all claims against [1], [8], [9].
§2 Stakeholders	Gemini; Claude	Mapped the section; drafted text	Linked ownership and the Subsoil Code to my design; checked [1], [7].
§3 Business model	Gemini; Claude	Mapped the section; drafted the transfer table	Made every Reject / Adopt / Pilot / Adapt verdict myself.
§4 Operating model	Gemini; Claude	Mapped the section; formatted the tier table	Set the tasks, review gates and fallbacks (my design assumptions).
§5a–c Operations, customer, workforce	Gemini; Claude	Mapped the sections; drafted text	Set the pilot scope and targets; labelled them as proposals.
§6 Governance	Gemini; Claude	Mapped the section; drafted text	Chose the controls, owners and escalation thresholds.

Component	AI tool	AI activity	My contribution and verification
§7 Business case	Claude	Formatted tables and ratio presentation	Checked every figure against the audited statements [1], [2]; recalculated the ratios; found the 4.02 error.
§8 Roadmap	Gemini; Claude	Structured the 7-column table; formatted it	Chose actions, owners, KPIs and gates; no costs invented.
§9 Stress test	Gemini; Claude	Mapped the section; drafted text	Decided what holds, changes and is abandoned.
Report	Claude	Drafted the report from my verified coursework	Reviewed and edited the text; checked figures and citations.
Business Impact Deck	Claude	Drafted and formatted the slides	Reviewed all slides; checked figures and citations.
E-Portfolio website	Claude; ChatGPT for A1–A4 wording	Wrote the HTML/CSS and page structure	Supplied the content, reviewed each page, published it on GitHub Pages.

Part C: Section-by-section coverage check

Capstone section	Where it appears in the deck	Where it appears in the report and website
§1 Context	Slide 2	Report §1; website Week 1, Capstone
§2 Stakeholders	Slide 3	Report §2; Week 2
§3 Business model and transfer	Slides 4–5	Report §3; Week 3, Companies
§4 Operating model	Slide 6	Report §4; Week 4
§5a Operations	Slide 7	Report §5a; Week 5
§5b Customer	Slide 8	Report §5b; Week 6
§5c Workforce	Slide 9	Report §5c; Week 9
§6 Governance	Slide 10	Report §6; Week 7
§7 Business case	Slides 11–12, 15	Report §7; Week 8, Evidence page
§8 Roadmap	Slide 13	Report §8
§9 Stress test	Slide 16	Report §9
Integration	Slide 14	Report and Capstone page

Part D: Business case and KPI verification

Claim	Status	Basis
2023 revenue, net profit, current assets and liabilities, inventory, cash, operating cash flow	Verified	Audited figures in [1], [2]; ratios recalculated by me (margin 40.45%, current ratio 3.00, cash ratio 0.49).
Samruk-Kazyna 75%; public float 25%	Verified	Shareholder information in [1].
Cameco hard-rock mines, 49% Westinghouse stake, Inkai shipment delay	Verified	Cameco 2023 Annual Report [3].
Sulfuric acid shortage; TITR rerouting	Reported	Media reports [8], [9]. The 48% share comes from my Assignment 1 evidence.
Subsoil Code groundwater protection	Verified	Code No. 125-VI [7].
ISR uses acid solution in porous ground	Verified	IAEA manual [6].

Claim	Status	Basis
48–72 h lab lag; 20,000+ wellheads; ±5% gate; >12 bar; 3% drift; 6-hour fallback	Design assumption	Proposed operating-model parameters from Assignments 1 and 2; not published Kazatomprom data.
5%–6% less acid per kg U; −10 days TITR transit; −30% Ulba exposure hours	Pilot target	Proposed targets, benchmarked on [6] and [3]; to be tested in the pilots.
Pilot costs and KZT savings	Not estimated	No verified data; quotes would be needed before approval.

Part E: AI error and correction log

Where	AI error or weak point	How I caught and corrected it
Week 8 / §7	A working calculation used unverified figures (KZT 1,250.0bn current assets, KZT 310.5bn current liabilities) and gave a current ratio of 4.02.	I rechecked the audited 2023 statements [1], [2]: current assets KZT 1,290,336M and current liabilities KZT 430,812M give 3.00. The cash ratio of 0.49 showed that KZT 423,314M is in inventory.
Weeks 3 and 7 / §3	Cameco's underground hard-rock robotics looked transferable.	I rejected it: Kazatomprom uses in-situ recovery, not hard-rock mining [6]. I kept only the automated packing and process-control ideas as pilots.
Reference list	An AI-assisted draft reference list contained sources I could not verify (for example a Cameco robotics white paper and a Kazatomprom 2025 operational report).	I removed them and rebuilt the list around ten sources that can be opened or checked. Claims that lost a source are now labelled design assumptions.
Claim wording	Pilot figures could read like Kazatomprom results.	I labelled the 5%–6%, 10-day and 30% figures, and the Week 4–5 thresholds, as proposed assumptions and pilot targets everywhere.

Part F: Visual disclosure

The deck and website use tables, a process map and an integration map built in PowerPoint and HTML/CSS with Claude's help. No AI-generated images, photographs or logos are used. All figures in tables come from the sources in the reference list or are labelled as my assumptions.

Part G: Consistency check

Item	Checked across website, report and deck
Recommendation wording	Same three pilots and the same human-control statement.
Audited 2023 figures and ratios	Same values: 40.45%, 3.00, 0.49.
Pilot targets and thresholds	Labelled as proposed targets and design assumptions everywhere.
Citation numbers	[1]–[10] match the same reference list.
Week 8 correction	4.02 corrected to 3.00 in Week 8, Attestation 4, Evidence page, report and Slide 15.
No unverified savings	No KZT savings claimed anywhere.

Part H: Reflection

The four prompts below are my own wording. Replace them with the prompts in the official template if they differ, and rewrite the answers in your own words.

1. What did AI do well?

It saved time on formatting, tables and structure, and it helped me see how the capstone sections fit together.

2. Where did AI get something wrong, and how did I notice?

A working ratio used unverified figures and showed 4.02. I noticed when I compared it with the audited statements and found 3.00. Some AI-suggested sources also could not be verified, so I removed them.

3. What did I decide myself?

I chose the sources, made every transfer verdict, set the thresholds and targets, and decided to label them as proposals.

4. What would I do differently?

I would check every figure and source against the original document before it goes into a draft, and I would keep a log of AI use from the first week.

Part I: Defence acknowledgement (Level 1)

I understand that I may be asked to explain and defend any part of my submission orally. I can explain the reasoning, figures and sources in my website, report and deck without AI help, and I accept that I am responsible for their accuracy.

Final declaration

Read each statement. Tick the box yourself only if it is true.

☐ The information in this declaration is complete and accurate.
☐ All AI tools I used are listed in Part A.
☐ I checked the facts, figures and sources in my submission myself.
☐ The analysis, verdicts and conclusions are my own.
☐ I understand the consequences of an inaccurate declaration.
