Week 2: State ownership and groundwater rules shape every decision

Weekly evidence artifact · Week 2 · Trimester 1, 2026

1. Theory anchor

Stakeholder power–interest analysis [10].

2. Artifact

Stakeholder	Interest	Power
Samruk-Kazyna (75%)	Dividends, capital kept in Kazakhstan, jobs in the south	High
Public investors (25%)	Returns, transparency (London/Astana exchanges)	Medium
Ministry of Energy	Subsoil compliance	High
Local communities	Safe groundwater, employment	Medium

3. Company A vs. Company B insight

Samruk-Kazyna’s mandate [1] explains why Cameco’s foreign Westinghouse stake [3] does not fit. The Subsoil Code [7] limits risky chemical changes.

4. Transfer verdict

Reject foreign reactor M&A; **Adopt** only changes that keep capital and jobs at home.

5. Evidence + verification

Ownership split [1]; legal limits [7]. Verified from the shareholder page and the Code text.

6. Mini-recommendation

The Board should test every AI project against the 75% owner’s domestic-capital goal; progress signal: a one-page stakeholder check per project.

7. Learning progression & AI disclosure

I first treated all shareholders alike. Now I see the state owner shapes what is realistic. AI helped draft the table headings; the judgement is mine.

Companies: Cameco (A) and NAC Kazatomprom JSC (B). Source numbers [n] refer to the Evidence page of the ePortfolio.
Proposed targets and thresholds are design assumptions and pilot targets, not verified Kazatomprom data.
