Week 8: Strong profit, but cash is locked in inventory

Weekly evidence artifact · Week 8 · Trimester 1, 2026

1. Theory anchor

Financial ratio analysis [10].

2. Artifact

Measure (2023, KZT m)	Value
Revenue	1,434,635
Net profit	580,335 → margin 40.45%
Current assets / liabilities	1,290,336 / 430,812 → current ratio 3.00
Cash	211,912 → cash ratio 0.49
Inventory (uranium products)	423,314 (328,015)
Operating cash flow	432,225

3. Company A vs. Company B insight

Cameco keeps inventory buffers and loans [3]; Kazatomprom has a similar inventory loan with ANU Energy.

4. Transfer verdict

Adopt a standing ratio check by the Senior Analyst.

5. Evidence + verification

Figures from the audited 2023 statements [1] [2]. My earlier draft used unverified numbers (1,250.0bn and 310.5bn), giving a wrong 4.02 ratio; the audited data corrected it to 3.00.

6. Mini-recommendation

The Senior Analyst should recheck all ratios against IFRS statements before any board paper; progress signal: zero unreconciled figures.

7. Learning progression & AI disclosure

This week taught me to verify before concluding. The ratio looked strong at 4.02 but was not. AI produced the first wrong calculation; I corrected it from the report.

Companies: Cameco (A) and NAC Kazatomprom JSC (B). Source numbers [n] refer to the Evidence page of the ePortfolio.
Proposed targets and thresholds are design assumptions and pilot targets, not verified Kazatomprom data.
